### PIKSA 1: Ol Grin Ekonomi Prinsipol<sup>1</sup>

**Well-Being:** A green economy must create genuine, sustained, shared wellbeing, going beyond mere monetary wealth to prioritise human development, health, happiness, education, and community.

**Justice:** A green economy emphasises equity, equality, community cohesion, social justice, and supporting human rights - especially the rights of marginalised minorities. It seeks a just transition and serves the interests of all citizens, including those yet to be born.

**Planetary Boundaries:** A green economy recognizes that all human flourishing depends upon a healthy natural world. It defends nature's function and limits, and protects biodiversity, soil, water, air and other ecosystem capitals.

**Efficiency & Sufficiency:** A green economy is low-carbon, diverse and circular. It recognizss that our single biggest economic challenge is the need to create prosperity within planetary boundaries, and align economic incentives with true costs to the society.

**Good Governance:** A green economy builds institutions that combine dynamic democratic accountability, relevant metrics, sound science, and local knowledge. Civil life prioritises public participation, social dialogue, informed consent, transparency, and accountability.

The company imported several types of electrical appliances such as refrigerator units, air conditioning units and lighting units that are regulated by the act. However, the equipment and appliances were not initially registered especially the refrigerator units as required by the act. The company was issued a penalty notice that amounted up to VT 96,000 for which payment was done accordingly.

The refrigerators were imported directly from China and the models were not registered. Therefore, the company was required to provide test reports to prove that they comply with AS/NZ minimum energy efficiency standards and labelling requirements. The same has not been provided as of now.
